## MATH 122A Calculus II **Sample Examination 2**

1. Find the derivative with respect to x of each of the following:

(a) 
$$2^{2-x^2}$$

(b) 
$$log_2(x^3 - 5x^2 + 3)$$

(d) 
$$\arctan (3x-5)$$

2. Determine each of following integrals: Determine each of following integrals: (a)  $\int_{-2}^{1} 7^{x} dx$  (b)  $\int \ln x dx$  (c)  $\int_{0}^{4} \frac{1}{x^{2} + 16} dx$  (d)  $\int x^{2} \cos x dx$  (e)  $\int_{0}^{\frac{\sqrt{2}}{2}} \frac{x}{\sqrt{1 - x^{4}}} dx$  (f)  $\int \frac{1}{x\sqrt{x^{6} - 4}} dx$  (g)  $\int \sin^{3} x dx$  (h)  $\int \frac{2x - 7}{(x - 3)(x - 4)} dx$ 

(a) 
$$\int_{-2}^{1} 7^x dx$$

(b) 
$$\int \ln x \, dx$$

(c) 
$$\int_0^4 \frac{1}{x^2 + 16} dx$$

(d) 
$$\int x^2 \cos x \, dx$$

(e) 
$$\int_0^{\frac{2}{\sqrt{2}}} \frac{x}{\sqrt{1-x^4}} dx$$

(f) 
$$\int \frac{1}{x\sqrt{x^6-4}} \ dx$$

(g) 
$$\int \sin^3 x \, dx$$

(h) 
$$\int \frac{2x-7}{(x-3)(x-4)} dx$$

3. Find each of these limits:

$$\lim_{x\to 0} \frac{5x}{\tan x}$$

(b) 
$$\lim_{x \to \infty} \frac{x - \cos x}{x}$$

(b) 
$$\lim_{x \to \infty} \frac{x - \cos x}{x}$$
 (c)  $\lim_{x \to \frac{\pi}{2}} (1 + \cos x)^{\tan x}$ 

4. Consider 2 new functions  $\sinh x = \frac{e^x - e^{-x}}{2}$  and  $\cosh x = \frac{e^x + e^{-x}}{2}$ . These are called the hyperbolic sine and hyperbolic cosine functions, respectively. They have many applications in science and engineering.

(a) Show that 
$$\cosh^2 x - \sinh^2 x = 1$$

(b) 
$$(\cosh x)' = \sinh x$$

- 5. Ecologists have discovered that the function  $f(x) = x^m e^{-nx}$  where m and n are positive constants and  $x \ge 0$  is important in the study of predator – prey relationships. Determine the values of x at which maxima and minima occur and the locations of points of inflection on the graph of f. Sketch the graph.
- 6. Student loans can take a very long time to pay off. If r is the annual interest rate on a loan and you make a monthly payment of P, then the Balance you owe at time t changes at a rate given by  $B'(t) = \frac{r}{12}B(t) - P$ . If the amount you borrow is \$B<sub>0</sub>, then  $B(0) = B_0$ assuming t = 0 corresponds to the time you graduate
  - (a) Find an explicit expression for B(t); that is, solve the differential equation to obtain an two expression for B(t) in terms of t.
  - (b) How long will it take to pay off the loan?
  - (c) If you borrow \$75,000 at an annual rate of 5% and make monthly payments of \$350, how old will you be when the loan is fully paid off? [You may use a calculator or Maple for this part].
